IMY 220 Project 2025 - checklist and declaration form

Please fill your details into the thick border boxes after the red text. Do not remove the red text
*Please change the cell colour to black in the **Yes/No** column into the thick border boxes*
*If you filled in any of the boxes, you will have to **show** and **explain** what you did and how you did it*
*The project will be marked by interacting with the website **only**, except in the "technologies and techniques" section*
Marks will be deducted for any errors that are encountered

Project demo (Immersive technology lab on the 4th floor of the IT building)

Date:	
Time:	

ClickUP submission

Uploaded Dockerfile, .dockerignore on ClickUP before 23:59 on 29 October	
ClickUP submission also contains exported database files (JSON)	
All files are in a folder named with Position_Surname	
The folder is compressed using .zip compression and the file is not corrupted	
The uncompressed folder's size does not exceed 50 MB	

Declaration

I am aware that I have to demo my final project using both my ClickUP and Docker submission	
I am aware that I will only receive marks for demoing using Docker	
I only used technologies and techniques that were part of the course	
I only used my own code	
I did not use code generators, templates or AI	
I did not plagiarise

Page 2. Marker: ?

Splash page		
Unregistered or logged-out users can only see a splash page (nothing else)		1
This splash page clearly indicates the purpose of the website		1
The splash page contains a log in and registration form		1
All form fields have working labels (if you click the label, it should focus on the associated input)		1
Bonus: Landing page with scrolling effects (parallax)		2
Profile Page [log into an existing account]		
A user can easily navigate to their own profile page when they are logged in		1
The profile has a profile image (or a placeholder)		1
A user can change their profile picture		1
The profile displays appropriate public information about a user (no private information)		1
A user can edit appropriate information in a logical manner		1
List of friends if user is viewing own profile		1
All the user's created posts appear on their profile page		1
All the user's saved albums appear on their profile page		1
Sensible way to display posts if there are many		1
Bonus: Users can upload profile images with a drag-and-drop interface		2
Bonus: Placeholder image is randomised		3
User interaction [navigate to another user's profile]		
*A **registered** user can do the following:*		
(If not friends) view only their name and profile picture		1
(If friends) view their list of friends		1
(If friends) view the complete user profiles of friends (including post), but cannot edit		1
Send another user a friend request (there must be a sensible and intuitive way to do this)		1
There are at least 10 registered users		1
Home page [log into existing account]		
When a user is logged in, activity feed is displayed on the home page		1
The user can switch between viewing the local and global feeds		1
Activity feed contains created posts and albums (by/from user's friends)		1
Activity is sorted by creation date in reverse chronological order		1
Logical test data (no lorem ipsum, qwerty, asdf, or any other meaningless data)		1
There are at least 10 created posts		1
Posts reported more than twice are hidden from the newsfeed		
Logical way to allow users to view hidden posts		
Bonus: Favourite users' posts appear in the top of the activity feed		2
Bonus: Can combine sorting and filtering, e.g., "Most commented this week", "Newest posts containing a selected hashtag"		2
Search [on Home page]		
A user can search for other users (using their names, usernames, email address) - logical way to do this		1
A user can search for a posts (using description or other sensible way) - logical way to do this		1
A user can search for an album (using name, description, or other sensible way) - logical way to do this		1
Search results are interactive, i.e., provide links to profiles, posts, etc.		1
Hashtags work, i.e. clicking on a hashtag does the same as searching for that hashtag		1
Bonus: You can find something even if the search term is a little incomplete		2
Bonus: You can find something even if the search term is spelled incorrectly		3
Bonus: Autocomplete functionality for search		2
Post creation		
Users can add new posts		1
Appropriate information (such as post name, description, hashtags) can be added		1
Caters for created date (should add automatically and not entered in manually)		1
Users can upload a post image		1
Bonus: Allow users to add files/images via drag and drop		2

Post page [post created by user]		
Post page shows description and hashtags		1
Post page shows which album(s) post belongs to (if any)		1
User can edit description and hashtags of their own post in a logical manner		1
Posts can be deleted		1
Bonus: deleting a post that is the only post in an album automatically deletes said album as well		2
Post page [post created by other user]		
A logical way to comment on posts		1
Comments are shown in a logical way if there are many		1
Can report posts and choose from predefined list of reasons		1
Album creation		
Users can create new albums		1
Appropriate information (such as album name, description, hashtags) can be added		1
Bonus: More frequent hashtags from posts are recommended when adding hashtags to an album		2
Album page [album created by user]		
Album page shows name, description, and hashtags		1
User can edit name, description, and hashtags of their own post in a logical manner		1
User can add or remove posts from their own album		1
Albums can be deleted		1
The admin [log into an admin user account]		
The admin user can do the following:		
Edit and delete all posts		1
Edit and delete all albums		1
Edit and delete all user accounts		1
View all reported posts		1
Add reasons for reporting posts		1
Bonus: alerts for users whose posts have been deleted by admins		2
Bonus: detect abuse of the reporting functionality		3
Bonus: functionality for admins to verify accounts (verification requests)		2
Penalty: any sloppy design (debugging alerts/text, empty pages, errors, etc.)		

Comments

Position_Surname:		
Page 4. Marker: Bosman/Grunewald		
Usability		
Only appropriate information is displayed at any time		1
Clicking on the website logo/name takes the user to the home page		1
Website functionality is easy and intuitive to use (e.g., links, navigation, error messages)		3
For example: automatically logs in when registering, error messages clearly describe how to fix, etc.		
Bonus: Light and dark mode		3
Technologies & Techniques		
Valid HTML5 & JSX everywhere		1
External style sheet(s) / TailwindCSS in className		1
CSS cascading variables / TailwindCSS custom colours		1
Tailwind for layouts		1
Using the API to manage functionality		1
Session / cookie management		1
No errors in browser console		1
Github README file contains all commands required to run on Docker		1
Website displays correctly on any resolution		2
DRY code (+explanation)		2
[Verbal explanation of any functionality - to be asked during demo]		3
Bonus Github branching		2
Impression		
Overall impression		10
Directory structure		
Images, fonts, scripts, css files, etc. are in their own appropriate folders		1
/backend and /frontend code logically separated		1
Components and pages separated into /components and /pages folders correctly		1
Only one index.html (everything else using React components)		1
Exported database is included in ClickUP submission		1
Visual Design		
All pages have a consistent layout and nav (except for the splash page)		1
Favicon fits with the theme of the website		1
Favicon is embedded on all pages		1
All pages clearly display the name of the website		1
Website has a distinctive but professional visual design (not a knockoff of an existing site)		2
Visual design applied consistently across the whole website		2
Good use of colour and colour schemes		2
Fonts look professional and fit the overall design and theme of the site		2
Fonts are legible		2
Layout is well-organised and easily readable		2
Docker / Hosting		
Can build and run project using Docker CLI		2
Penalty: any sloppy design (debugging alerts/text, empty pages, errors, etc.)
